The first item in my portfolio is an app called "iSearch" which utilizes facial recognition technology to identify child beggar who was a missing child before becoming a child beggar. I did the interaction design, UX/UI design and part of coding of this app, which shows my designing skill and my coding skill and also my ability to use software such as Adobe Photoshop and Android Studio. In addition, I put my design process in the portfolio to show how I designed this app from coming up with the idea to doing research, to designing the interface. The second item in my portfolio is a concept of an app called "slide music" which is designed to provide a better experience for one-handed use. I did UI design and motion design which shows my ability to make animation. The third item is also a concept of a camera app called "tap tap" which enable users to use different gesture to take pictures rather than using the shutter button. In addition to the UI and UX design, I made a prototype video to show how this app works. This item shows my ability to make videos. The fourth item is a short film. Although this item is not in an area your program focus on, I think this short film not only shows my ability in filmmaking, but it also shows my ability to be a leader in a team and cooperate with team members, which I believe is very important in this project based program.

I chose these works and put them in my portfolio because each of those works has a different focus and each of them shows my ability in different areas. Thus I believe those works are able to show my strengths: creativity and experience in different art area and make me a valuable member in your program.
